10. Abstract: Subtitle C of the Resource Conservation and Recovery Act of 1976 (RCRA) creates a comprehensive program for the safe management of hazardous waste. Section 3004 of RCRA requires owners and operators of facilities that treat, store, or dispose of hazardous waste to comply with standards established by EPA that are "necessary to protect human health and the environment." EPA promulgated ground-water monitoring standards for interim status facilities in 1980 (45 FR 33154 May 19, 1980), codified in 40 CFR Part 265, Subpart F, and for permitted facilities in 1982 (47 FR 32274 July 26, 1982), codified in 40 CFR Part 264, Subpart F. Both sets of standards establish programs for protecting ground water from releases of hazardous wastes from land disposal facilities with regulated units (these include surface impoundments, waste piles, land treatment units, and landfills). The ground-water monitoring requirements for regulated units follow a tiered approach whereby releases of hazardous contaminants are first detected (detection monitoring), then confirmed (compliance monitoring), and, if necessary, are required to be cleaned up (corrective action). Each of these tiers requires collection and analysis of ground-water samples. Owners or operators that conduct ground-water monitoring are required to report information to the oversight agencies on releases of contaminants and to maintain records of ground-water monitoring data at their facilities. The goal of the ground-water monitoring program is to prevent and quickly detect releases of hazardous contaminants to groundwater, and to establish a program whereby any contamination is expeditiously cleaned up as necessary to protect human health and environment.
